CANRES WEBINAR SERIES

Treating cancer with light - a dream come true?

8 July 2022 | Friday | 10-11 am

ABSTRACT

Phototherapy, the use of light as a therapy for various diseases, have been introduced since the ancient civilizations and underwent ages of prosperity and decline throughout history. Today, light is being used for cancer diagnosis and therapy as an alternative for standard cancer treatment regimen such as chemotherapy due to its high specificity and low side effect nature. This webinar will introduce audience to the history, advantages, current research and future possibilities of next generation medicine – photodynamic technology.
